Summary

Customer-focused frontend engineer with experience building fast, user-friendly, data-driven web applications using Typescript, Javascript, React, and CSS. Experienced with CLIs and backend servers employing Ruby (Rails), NodeJS, and some Java. Passionate about listening to customers to iterate on user experience and flow. Interested in visualization, learning, and empowering users to get stuff done.

Top Skills

- **OS & coding:** Typescript, JavaScript, Ruby, Linux, git, NodeJS, some Python, some Java
- **Web focused:** React, HTML/DOM, CSS/Sass, Fetch, Vite, microfrontends, Rails, Vitest, Jest, UX design, some web security, some accessibility, some Vue, some Webpack
- **Other:** product ownership iteration and support, process improvement, data analysis (Excel, AWS QuickSight), teaching/tutoring

Experience Summary (2007-2024)

Company	Role	Start	End	Years	
(freelance)	Freelance/personal projects	Jan 2025		1	□□
Amazon	Frontend Engineer II	Sep 2014	Jan 2025	10.3	□□□□□□□□□□□□□□□□
Amazon	Technical Support Engineer	Mar 2011	Sep 2014	3.5	□□□□□□
(various)	Tutor and office temp	Jan 2010	Mar 2011	1.2	□□
Peace Corps	Education Volunteer, Uganda	May 2007	Aug 2009	2.2	□□□□

Professional Experience

1. **Frontend Engineer II** — *Amazon Web Services* (3 roles) (Seattle, WA)
 1. *Codex* (internal): Improved, fixed, and supported Amazon's internal code review and code browsing sites for 5 years. Delivered new features including UX design, prototyping, implementation, and iteration based on customer feedback (e.g. new code review dashboard, multi dry run build, artifact browser). Resolved many customer experience issues by self-initiating fixes such as unwanted email reduction, a11y colors, introducing comment filtering, and correcting code inter-diff. Additionally, sunsetted a legacy service, while preserving web links (DevCentral). Helped shape team priorities by managing the product backlog and contributing to product direction.
 2. *QuickSight*: Implemented features for QuickSight, Amazon's BI analytics product for ~4 years. This included KPI and geospatial charts, and an anomaly exploration page. Also led a multi-team effort to upgrade from React 13 to 16 and drove fixing of many customer experience issues.
 3. *Meetings* (internal): Designed, implemented, and supported a new internal website, Amazon Meetings for ~1.5 years. The site filled a gap in searching for meeting times with appropriate conference rooms.

2. **Technical Support Engineer** — *Amazon Web Services* (Seattle, WA): Provided deep technical support for a wide array of services (compute, storage, DNS, content delivery, load balancing, coding) for a range of customer backgrounds for ~2 years. This transitioned into ~1 year of development on internally used web-based tools, dashboards, and scripts.
3. **Tutor and office temp** — *(various)* (Seattle, WA)
4. **Education Volunteer** — *US Peace Corps* (Uganda, Africa): Supported elementary school student teachers with classroom observation and weekend classes for 1 year. For the remaining 1.5 years I funded, sourced, and installed a school computer lab and created a basic computer skills curriculum, which I taught to teachers, students, and community members.

(references available on request)

Other

- (Significant Side Project) [Guess My Word](#): A daily word guessing puzzle with ~1.5K users per day. The main game is frontend-only in Vue.js and a Node server supports the backend for the leaderboard.
- (Volunteering) **Tutoring**: (2018-2023) One-on-one tutoring of elementary through high school students in Columbia City neighborhood.
- **Other interests**: Visual Logic Puzzles, Biking, Board games, Mountain biking, Rollberblading, Climbing

Education

- 2002-2006: BS cum laude with College Honors in **Physics at University of Washington** GPA: 3.85 / 4.0
